

NGUYEN PHUC THANH

Hanoi, Vietnam | 033 281 2606 | thanhng224@gmail.com | <https://github.com/ThanhNg224>

OBJECTIVE

Full-stack developer focusing on Mobile (Flutter, Kotlin, MVVM, Jetpack) and scalable web/back-end systems (Node.js, React). Interested in building reliable Mobile apps and also capable of working across web/backend when needed.

Check out my portfolio at: thanhng224.github.io/react-portfolio

EDUCATION

Hanoi University of Science and Technology – HUST

B.Sc. in Multimedia Engineering (Advanced Program)

Hanoi, Vietnam

2021 – 2025

LICENSES AND CERTIFICATIONS

IELTS Academic - 7.0

Issued by IDP Education Co., Ltd

September. 2024

EXPERIENCE

ATIN – Advanced Technology Innovations

Android Developer (Mobile Focus)

Hanoi, Vietnam

Jul. 2024 – Present

- Developed and maintained Android applications for biometric face-terminal devices, working with both legacy **Java/XML** and modern **Kotlin/MVVM** codebases.
- Used Jetpack Components (ViewModel, LiveData, Room, WorkManager) to structure apps and manage data effectively.
- Implemented API integrations, biometric SDKs, and background services for device monitoring and automated updates.
- Worked in Agile teams, did code reviews, and applied SOLID principles to keep code clean and consistent.

FPT Software (Training Internship)

C++ Training Program

Hanoi, Vietnam

June. 2024 – September. 2024

- Completed an intensive C++ curriculum covering algorithms, data structures, software design, and system-level programming.
- Developed an AI-driven Tic-Tac-Toe game as a capstone project, enhancing problem-solving and teamwork skills.

NOTABLE PROJECTS

Below are just a few of my notable projects. Feel free to explore my GitHub for more!!!

Device Management System – Android OTA Agent & Monitoring Platform | *Kotlin, JavaScript, Node.js, Next.js, MongoDB,*

Team Size: 1

GitHub: <https://github.com/ThanhNg224/DeviceManagement> (Private)

- Developed a lightweight **Kotlin agent** for Android-based face terminals to perform silent APK installations and background updates.
- Built background services to collect telemetry (CPU, RAM, storage), send real-time status via WebSocket, and store logs for later analysis.
- Integrated with a web dashboard (Next.js + Node.js) to trigger OTA updates, view device logs, and track online/offline status.
- Ensured reliability with retry mechanisms, secure downloads, and modular architecture for maintainability.

Viettel EID/Passport Verification App – Android Kiosk Solution | *Kotlin, MVVM, Jetpack, ML Kit, REST API*

Team Size: 1

GitHub: <https://github.com/ThanhNg224/Viettel> (Private)

- Developed a production-ready kiosk app in **Kotlin** for CCD/passport verification, deployed on Joyusing Z10S Pro devices.
- Implemented a full verification flow: document capture, MRZ OCR, NFC chip reading, portrait liveness detection, and biometric matching with Face Engine API.
- Applied **MVVM with Jetpack (ViewModel, LiveData, Room, WorkManager)** for clean architecture and testable code.
- Integrated digital signing, cash/QR payment flows, and video-call verification modules with Viettel backend systems.
- Enhanced UX with custom progress indicators and in-app feedback surveys.

DSoft – Spa Management Application | *Flutter, Dart, BLoC Architecture*

Team Size: 1

GitHub: <https://github.com/ThanhNg224/DSoft>

- Built a full-featured Flutter-based spa & wellness center management app with Clean Architecture and custom BLoC framework.
- Implemented core business modules: spa branches, staff, customers, services, products, bookings, orders, and warehouse management.
- Developed financial features including debt tracking, prepaid card management, and statistical business reports.
- Engineered specialized modules such as room/bed layout, combo treatments, subscription services, and custom categorization.
- Designed scalable technical architecture with reusable UI components, repository-based data layer, multi-language support, and token-based authentication.

Coffee Shop Website & Android App | *JavaScript, ReactJS, NodeJS, React Native, MySQL, Expo*

Team Size: 3

GitHub: <https://github.com/ThanhNg224/CoffeeShopProject>

- Built a coffee shop website and Android app with distinct user and admin roles, leveraging Node.js for the backend and MySQL for data.
- Implemented user features like product browsing, account management, rating/review, and feedback submission.
- Developed an admin panel for inventory management, sales data, user oversight, and review moderation.
- **My Role:**
 - * **Web:** Implemented login/logout with role management (admin vs. user), comments/ratings (publicly displayed), a site-wide view counter, and admin content moderation (edit pages, remove feedback).
 - * **Mobile App:** Connected the app to the backend via RESTful APIs, built main/login screens, and developed content display features that fetch data from the server.

Raincaster: Real-Time Forecasts with Advanced Rain Detection | *Python, TypeScript, Flask, ReactJS, Tailwind, scikit-learn*

Team Size: 1

GitHub: <https://github.com/ThanhNg224/Raincaster>

- Built a web-based weather forecasting platform integrating real-time meteorological data, with a dedicated focus on predicting rainfall.
- Architected a Flask-based backend that fetches and preprocesses real-time weather data for an SVM model.
- Developed a user-friendly interface displaying current conditions and predicted rain probabilities, helping users make timely decisions.

TECHNICAL SKILLS

Languages: JavaScript, Kotlin, Dart, Python, SQL

Mobile: Android Native (Kotlin) Flutter, React Native

Front-end: ReactJS, NextJS, Tailwind CSS

Back-end: NodeJS, Flask, MongoDB, MySQL

Tools & Platforms: Firebase, Git, Linux, Blender, Maya

Machine Learning: ML Kit, OpenCV, basic model training and evaluation

HONORS AND AWARDS

Third Prize in District Chemistry Competition

Issued by Haiphong Department of Education and Training

HaiPhong, Vietnam

Dec. 2020
